Corrections to »The Analysis of Data from Small Mammal Trappings«

I. J. LINN & F. DOWNTON

Owing to an unfortunate concatenation of circumstances, the paper by Linn & Downton (1975) describing a suggested statistical method for the analysis of data obtained from small mammal trappings in order to obtain indices of population density was printed with a number of typographical errors uncorrected.

Throughout the paper the Greek letter \( \nu \) appeared in place of the square-root sign and this should be corrected in the following places: p. 323, equations (7) and (9); p. 324, equations (13) and (15); p. 325, equations (17), (22) and (23); p. 326, line 6 up; p. 327, lines 9 and 23; and p. 330, line 17.

Roman 's have been used in place of italics in some of the formulae as a suffix for \( \lambda_i \) and \( a_i \); p. 322, equations (2) and (3); and p. 325, equations (18) and (22).

Other minor misprints are:

- p. 320, line 14: 'definitely not definitely.
- p. 321, line 10: involves not involes.
- p. 321, equation (1): \( \lambda_i (1-e^{-\lambda})/\lambda \) not \( \lambda_j (1-e^{-\lambda_j})/\lambda \).
- p. 322, lines 2—3 after equation (4): The minus sign of line 2 should be attached to \( E \{ \delta^2 \log L / \delta \lambda_i \delta \lambda_j \} \) in line 3.
- equation (3): Delete minus sign between log and \( \frac{a_0}{t} \).
- equation (6): Bracket omitted in \( -te^{-\lambda} / (1-e^{-\lambda}) \).
- p. 323, line 4: \( ^\wedge \lambda \) not \( \lambda \).
- p. 324, line 3: \( ^\wedge \lambda_i \) not \( ^\wedge \lambda_i \).
- lines 15—17: This sentence should read »This last comparison can only be made using this particular analysis, if there are only two species present or if it is required, within a sample, to compare one species with all other species taken together in the sample«.
- p. 325, line 6 up: \( ^\wedge \lambda_i - ^\wedge \lambda_j \) not \( ^\wedge \lambda_i - ^\wedge \lambda_j \).
- p. 326, line 20: \( ^\wedge \lambda_i = - \log (a_{16}/t_1) \) not two equals signs.
- p. 327, line 15: \( a_{21} + a_{22} \) not \( a_{21} + a_{22} \).
- p. 328, line 7: visited not visisted.
- line 3 up: carefully not cerefully.
- p. 331, line 9: 73—96 not 59—72.
