## ДОЛГОНОСИКИ (COLEOPTERA, CURCULIONIDAE) ВАРШАВЫ И МАЗОВИИ

ГЛАВНОЕ

На территории Мазовии в Варшаве констатировано 452 вида *Curculionidae* в общей сложности. На территории варшавской агломерации 346 видов, в пригородах 292 вида, в парках 139 видов, на территории жилых районов 48 видов, а в центре города только 73 вида. В границах города возрастает процентное соотношение видов, имеющих широкую зоогеографический ареал, таких как космополитические, голарктические и палеарктические. Как в Мазовии, так и в Варшаве встречается большое число луговых и пастбищных видов. А процентное содержание этих видов возрастает по мере роста урбанизации.

Наиболее благоприятные условия для развития в городе имеют виды, которые
