

NON-EUROPEAN LABOULBENIALES

by

Tomasz MAJEWSKI & Keiichi SUGIYAMA*

In 1984 prof. Keiichi Sugiyama invited T. Majewski for a one-year visit, in order to jointly study *Laboulbeniales* of East Asia. During his stay at Shizuoka, T. Majewski revised and described a part of the collection of K. Sugiyama, and prepared, together with the latter and with Y. B. Lee, papers on *Laboulbeniales* of East Asia: Japan (4, 5), Indonesia (1, 2, 7), Papua New Guinea (3), Malaysia (6, 8), as well as one publication (9) dealing with *Laboulbeniales* of Mexico, Peru and Ecuador. These papers deal with many *Laboulbeniales* species new to the respective countries, including descriptions of 30 species from East Asia and eight species from Latin America, new to science.

During his stay in Japan T. Majewski collected extensively the *Laboulbeniales* in the central part of the Honshiu Island, and in one of the islands of the Ryukyu Archipelago. This collection (430 specimens) was brought to Poland and then described by T. Majewski in four papers (10-13). These publications contain, among others, descriptions of 27 species new for Japan, including seven species new to science.
