## 1. Maps of population density and GDP density for Poland

A map of population density is a key data for estimation of spatial distribution of GHG emissions in a number of sectors (e.g., residential sector) as well as for producing a map of GDP.

The GDP map can serve a proxy for estimation of spatial distribution of GHG emissions in some sectors, e.g., Industrial Processes. While using the GDP map for such purposes one should also look at GDP structure to determine the share of GDP produced in respective economy sector and try to locate respective production zones, e.g. industrial zones where the emissions are generated (e.g., combining the GDP map with maps of land cover and inhabited places).

The spatial GHG inventory is produced on 2x2 km grid starting from the year 2009 therefore we prepare the maps of respective resolution using 2009 statistical data.

### Map of population density

A map of population density for the EU+Croatia with spatial resolution 100x100 m and 2000-2001 census data (raster; Galelo, 2010) and a map of population of Poland for small administrative units (municipality – in Polish *gmina*) for the years 1999-2009 (vector; IMAGIS, 2012) are used (*Figure 1.1*).

The territory of Poland has been clipped from the original population density map, and then the map obtained had been aggregated to the 2x2 km grid.

A new column with relative change of population density in 2000-2009 has been added to the attribute table of the IMAGIS map. Then the map was converted to 2x2 km raster snapped to the population density map, and the projection was set up similarly to the population density map (see Annex).

Having those operations done the population density of 2000 in each grid cell (high resolution) was multiplied by the relative change of population in municipality. The map obtained shows the number of persons per km<sup>2</sup> (*Figure 1.2*).

### Map of GDP density

The map of GDP density was produced by multiplication of GDP per capita (current prices) in administrative regions of Poland for the year 2009 (GUS, 2012) and for population density (similar method used by Sachs et al. (2001), Gaffin et al. (2004)). The statistical data were put on the map (IMAGIS, 2012) using the appropriate codes of sub-regions (*podregiony*). The map was converted to 2x2 km raster snapped to the population density map (*Figure 1.3*), and the projection was set up to be similar to the population density map (see Annex).

Then in each grid cell the GDP was multiplied by the population density. The map shows GDP density in Zl/km<sup>2</sup> for 2009 (Zl = Zloty = PLN) (*Figure 1.4*).

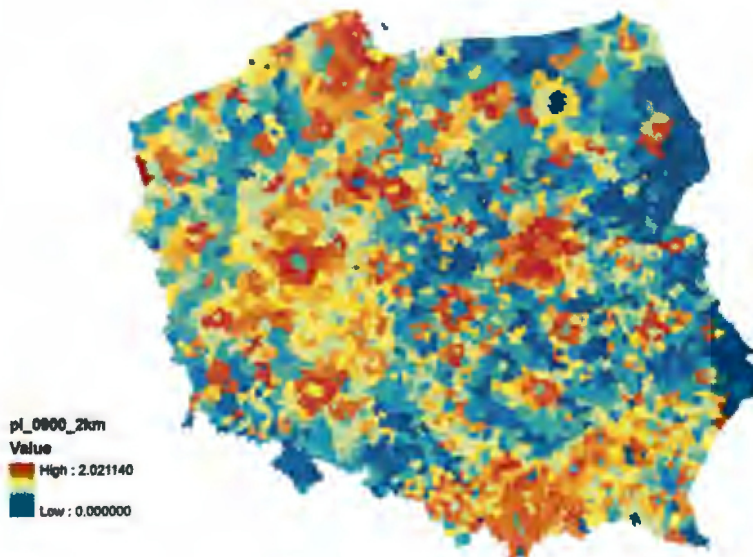

Figure 1.1. Relative change of population in Poland in 2000-2009

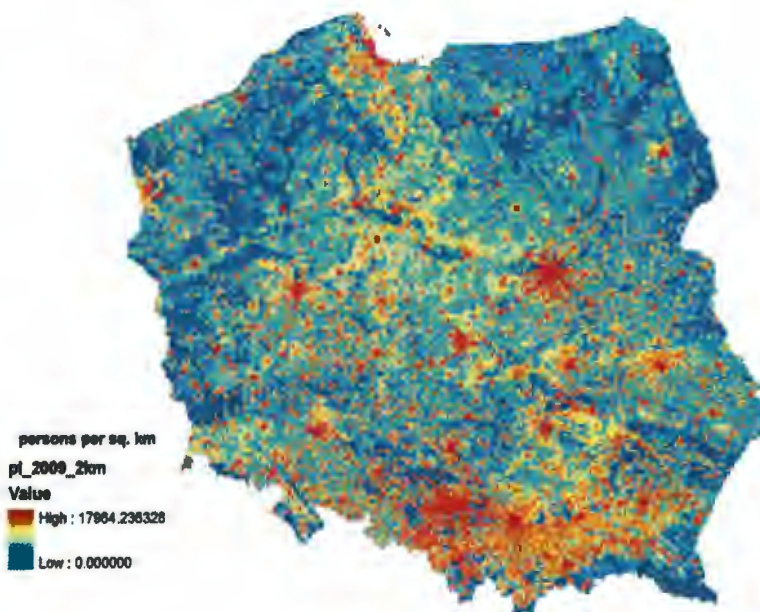

Figure 1.2. Population density of Poland in 2009

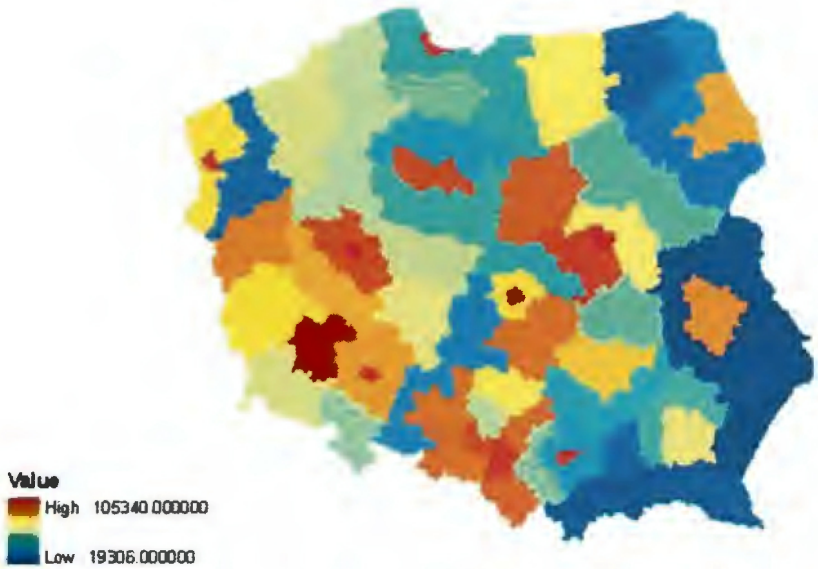

Figure 1.3. GDP per capita in Poland, 2009 (PLN/person, current prices)

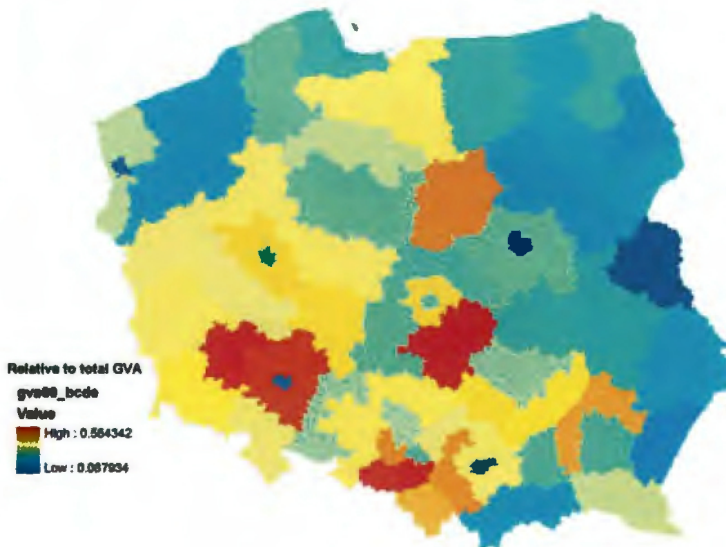

Figure 1.4. GDP in Poland in 2009 (PLN/km<sup>2</sup>, current prices)

The GDP density maps for economy sectors have been produced by multiplying the GDP density map and maps of relative gross value added (GVA) (*Figure 1.5.*) in respective economy sectors. The GVA data for administrative regions of Poland for 2009 come from the database of the Central Statistical Office of Poland (GUS, 2012). In the database the economy sectors are grouped, using the following scheme:

- agriculture, forestry and fishing (section A) (*Figure 1.6.*)
- industry (sections B,C,D,E) (*Figure 1.7.*)
- manufacturing (section C) (*Figure 1.9.*)
- construction (section F) (*Figure 1.10.*)
- trade; repair of motor vehicles; transportation and storage; accommodation and catering; information and communication (sections G,H,I,J)
- financial and insurance activities; real estate activities (sections K, L)
- other services (sections M,N,O,P,Q,R,S,T)

Additionally the GDP density map for industry without manufacturing (sections B,D,E) (*Figure 1.8.*) is produced. The GVA for the sections B,D,E is obtained by subtracting GVA for section C from GVA for sections B,C,D,E.

The economy sectors are listed in Annex 2.

**Figure 1.5.** Relative GVA generated in industry (sectors B,C,D,E)

Figure 1.6. GDP generated in agriculture, forestry and fishing in Poland, 2009 (Section A) (PLN/km<sup>2</sup>, current prices)

Figure 1.8. GDP generated in industry excluding manufacturing in Poland, 2009 (Sections B,D,E) (PLN/km<sup>2</sup>, current prices)

Figure 1.9. GDP generated in manufacturing in Poland, 2009 (Section C) (PLN/km<sup>2</sup>, current prices)

**Figure 1.10.** GDP generated in construction in Poland, 2009 (Section F)  
(PLN/km<sup>2</sup>, current prices)

### Annex 1.1. Projection parameters

Projection: Lambert\_Azimuthal\_Equal\_Area  
False\_Easting: 4321000.000000  
False\_Northing: 3210000.000000  
Central\_Meridian: 10.000000  
Latitude\_Of\_Origin: 52.000000  
Linear Unit: Meter (1.000000)  
Geographic Coordinate System: GCS\_ETRS\_1989  
Angular Unit: Degree (0.017453292519943299)  
Prime Meridian: Greenwich (0.000000000000000000)  
Datum: D\_ETRS\_1989  
Spheroid: GRS\_1980  
Semimajor Axis: 6378137.000000000000000000  
Semiminor Axis: 6356752.314140356100000000  
Inverse Flattening: 298.257222101000020000

**Annex 1.2. Specification of the economy sectors used by the Central Statistical Office of Poland (NACE Rev. 2, p.59)**

- A - Agriculture, forestry and fishing
- B - Mining and quarrying
- C - Manufacturing
- D - Electricity, gas, steam, and air conditioning supply
- E - Water supply; sewerage, waste management, and remediation activities
- F - Construction
- G - Wholesale and retail trade; repair of motor vehicles and motorcycles
- H - Transportation and storage
- I - Accommodation and food service activities
- J - Information and communication
- K - Financial and insurance activities
- L - Real estate activities
- M - Professional, scientific and technical activities
- N - Administrative and support service activities
- O - Public administration and defense; compulsory social security
- P- Education
- Q- Human health and social work activities
- R - Arts, entertainment and recreation
- S - Other service activities
- T - Activities of households as employers; undifferentiated goods- and services-producing activities of households for own use
- U - Activities of extraterritorial organisations and bodies
