The Computerized Support System
for Decision Making in Economy

Michail M. Greshilov, Alexey Yu. Zalozhnev

Computer system for decision making is considered in this paper. It permits to base the government regulation decisions in economy. This system allows to investigate the various versions for the fiscal and financial government policy in conditions of the transition from the centralized to market economy.

System contains the macro description of economy in the ordinary differential equations terms. It's provided with interface permitting to control the parameters over the model function process. It's also provided with some another useful functions.

Computer version of the system is designed on the base of the modeling language "Interactions".
