### Kardiomiopatia

Ocena ultrastrukturalna wykazała w większości kardiomiocytów nieregularny układ aparatu kurczliwego (Fig.2,5,12,17.). Mitochondria posiadały jasną elektronowo macierz (Fig.3) Jądra kardiomiocytów charakteryzowały się nieregularnym kształtem (Fig.2,21.). Obserwowano liczne komórki immunokompetentne (Fig.7,13.).

### Cardiomyopathy

Electronmicroscopy analysis revealed an irregular arrangement of the contractile apparatus in majority of cardiomyocytes (Figs.2,5,12,17.). Mitochondria were characterized by bright matrix (Fig.3). Irregularly shaped cardiomyocytes nuclei were visible (Figs.2,21.). Numerous immunocompetent cells were observed (Figs.7,13.).

A high-magnification electron micrograph of a cell. The image shows a large, irregularly shaped nucleus with a prominent nucleolus. Within the cytoplasm, several mitochondria are visible as dark, tubular structures. Other organelles, such as endoplasmic reticulum and vesicular structures, are also discernible. The overall texture is granular, typical of biological tissue.
